DETAILED ACTION

This is in response to amendment file 08/08/05.

Allowable Subject Matter

Claims 1-19 are allowed.

The following is an examiner's statement of reasons for allowance:

The Joreme et al. failed to discloses or suggest the three Lists include a continuous attribute List for each continuous attribute, a discrete attribute List, and a cost attribute List. Each continuous attribute Lists contains the continuous attribute values, separating the data into at least three lists, (ii) adding a label to each of the continuous attribute lists, the discrete attribute list and the cost attribute list; (iii) sorting the continuous attribute lists based on a continuous attribute value in each row of the continuous attribute lists; and (iv) adding a label to the cost list.. The discrete attribute lists contains the discrete attributes and the discrete attribute values. The cost attribute list contains the costs output values, the label added to each list is an index of a tuple to which the respective attribute value belongs within the relational data table. The label of step (b) added to the cost list is a cost flag, initially set to one, that indicates whether the tuple containing the cost output value is enclosed within the hyper-rectangle. As described above, the Joreme et al. does not disclose separating the data into at least three lists, while Joreme et al. presents a procedure directed towards this goal based on the notion of patient rule induction, this patient strategy is contrasted with the greedy ones used by most rule induction methods, and semi-greedy ones used by partitioning

tree techniques presented in data mining . Accordingly, Claim 1 is in a condition for allowance.

Claims 3-11 are depended on claim 1, therefore they are also object able.

The following is an examiner's statement of reasons for allowance: The Jerome et al. failed to discloses: In a parallel architecture computer system having a large disk resident data set, a method of analyzing the disk resident data set using a patient rule induction method (PRIM), comprising steps of separating the data into Ac+2 lists, such that a list is generated for each continuous attribute to form Ac continuous attribute lists containing the continuous attribute values, a discrete attribute list containing the Ad discrete attribute and the discrete attribute values and a cost attribute list containing the cost output value as recited in claims 12 and 16.

Claims 13-15 and 17-19 are depended on claims 12 and 16, therefore they are also allowable.
